EXPERIENCE

Capisoft

Software Engineer

Netherlands

Mar 2026 – Present

Currently serving as the lead developer for LegalPal's accounting integrations and outbound email system; Capisoft's all-in-one software platform for law firms.

- Avoided roughly EUR 10,000 in expected first-year vendor spend. Rejected an unsuitable third-party accounting integration and architected the in-house replacement now used in production.
- Designed one shared accounting layer for multiple systems. Added durable export records, payment and document synchronization, and a safe migration of legacy data. The design let another engineer add a second accounting system without a rewrite.
- Rebuilt outbound email as a durable state machine with persistent delivery records, duplicate protection, safe retries, and crash recovery. Owned the company-wide rollout and production monitoring.

Microsoft

Cloud Solution Architect Intern

Amsterdam, NL

Sep 2025 – Feb 2026

- Identified a customer-critical gap in connecting external AI agents to Microsoft Teams and Microsoft 365. Designed and built a reusable proxy-agent integration.
- Shipped the solution in production for the first customer. Its success led to reuse across two additional customer engagements.
- Earned end-to-end ownership of the follow-on projects. Led discovery, requirements, architecture, and implementation as the primary technical contact.
- Packaged the approach for internal reuse and enabled colleagues to connect other external agents through the same architecture.

Vrije Universiteit Amsterdam

Teaching Assistant, Computer Science

Amsterdam, NL

2024 – 2025

Courses: Operating Systems, Web Technology, and Systems Programming Project (SyPP).

- Led web-technology classes of 30 and supported an Operating Systems course with more than 400 enrolled students. Taught C/UNIX, JavaScript, Node.js, REST APIs, and asynchronous programming.
- Rewrote several chapters of the SyPP course manual to make difficult material clearer for first-time students. Students responded positively, and instructors retained the revisions for later cohorts.
- Built a Docker development environment that gave macOS students a consistent setup for systems projects.

EDUCATION

Vrije Universiteit Amsterdam

B.Sc. Computer Science (in progress)

Amsterdam, NL

2022 – Present

- Earned 10/10 on a Philosophy of Mind paper examining whether language models genuinely think and arguing that language can encode world knowledge sufficient for rational inference. The instructor reported four perfect scores.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C, Scala

Frameworks and Systems: React, Node.js, Django, PostgreSQL, Celery, Microsoft Graph, Docker, Kubernetes, Azure, AWS, Git
